1 Changes

Changelog: [CHANGELOG.md](#)

Release history: [Releases · maksuturva/woocommerce_payment_module \(github.com\)](#)

2 Service requirements

The plugin requires an activated Svea Payments payment service to work in production.

For testing purposes, you can order test credentials to Svea Payments test environment. For more details, see the Testing section at <http://docs.sveapayments.fi>.

Without an active Svea Payments (test environment or production environment) account, you can test the plugin using the Sandbox test mode. See more about testing in section 8.

3 System requirements

The Svea Payments Payment Gateway plugin for WooCommerce was tested on and required the following set of applications to work fully:

Requirement	Supported versions
WooCommerce	<ul style="list-style-type: none">7.x, 8.x
WordPress	<ul style="list-style-type: none">6.x
PHP	<ul style="list-style-type: none">7.x, 8.x
PHP cURL Module	<ul style="list-style-type: none">Any
PHP mbstring module	<ul style="list-style-type: none">Any

There is no guarantee that the plugin is fully functional in any other environment.

4 Package contents

This guide assumes that the user correctly downloaded all the package files. Folder structure:

File	Description
CHANGELOG.md	Change log
docs/*	Plugin documentation
includes/*	Class files included by the main plugin class to separate business logic into logical containers
languages/*	Plugin translations
templates/*	Template files used by the module both in the back-end and front-end
LICENSE	Plugin license file
Svea_logo.png	Svea Payments logo used by WooCommerce
README.md	Readme file
RELEASE.md	Release documentation for GitHub CI
wc-maksuturva.php	Main class

5 Installation

Before any change in your environment, we strongly recommend that you back up the entire existing WordPress and WooCommerce installation.

Also, see notes regarding WooCommerce HPOS mode, section 11 [About HPOS](#)

5.1 Installing the Plugin

- 1) Download the latest zip release package from:
https://github.com/maksuturva/woocommerce_payment_module/releases/latest
- 2) On the WordPress plugins page, select Add New (*Lisää uusi*) and then Upload Plugin (*Lataa lisäosa*).

Choose the downloaded zip release package file and select Install Now (*Asenna nyt*).

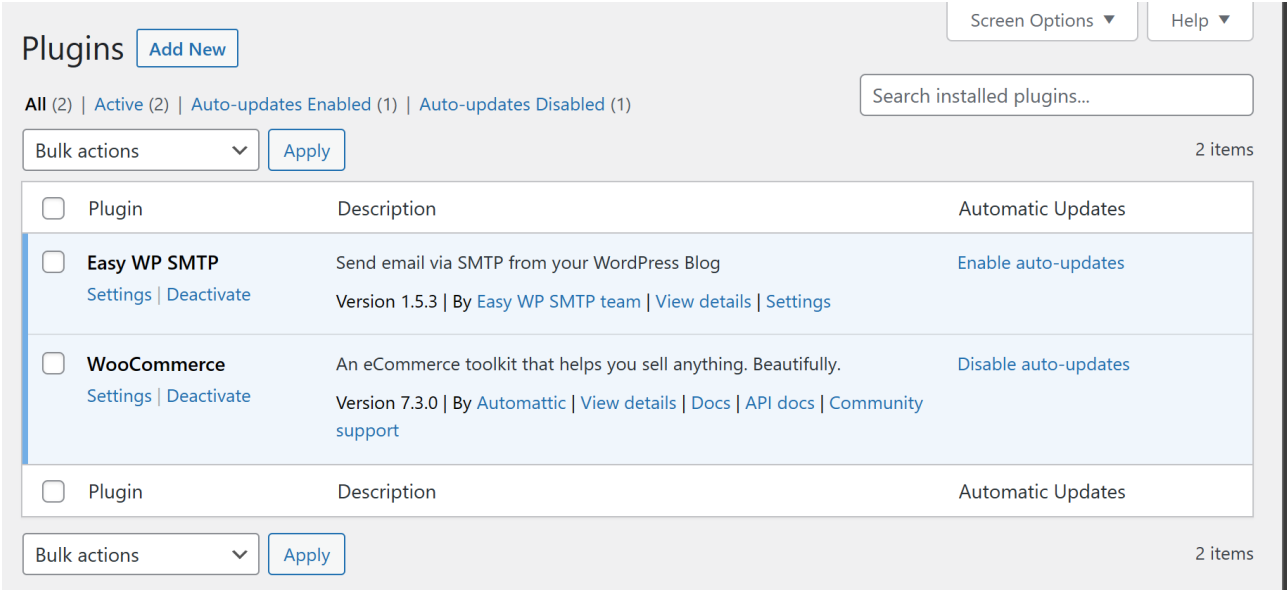

Note! If you receive this error when uploading the zip package, you need to change your server php.ini settings to allow 6M file size at least.

Siirretty tiedosto on suurempi kuin mitä on määritelty muuttujalle upload_max_filesize tiedostossa php.ini.

For more information, how to install WordPress plugins other ways, see:

<https://wordpress.com/support/plugins/install-a-plugin/#install-a-plugin-with-a-zip-file>

- 3) Choose Activate (*Aktivoi*) the plugin.

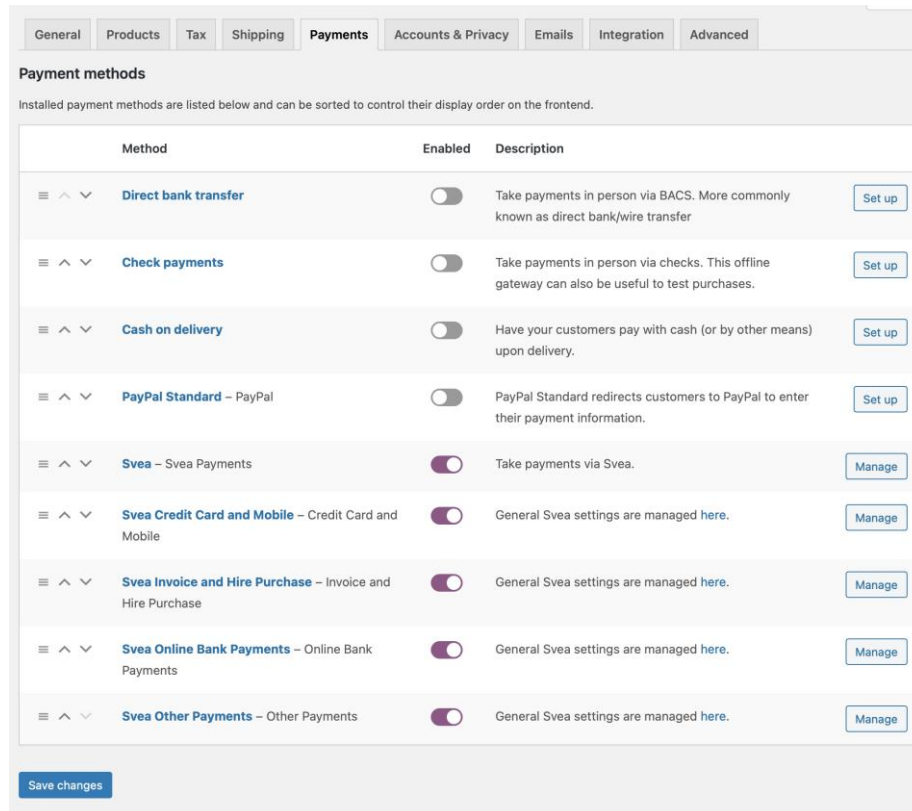

The screenshot shows the WordPress 'Plugins' page. At the top, there's a 'Plugins' header with an 'Add New' button. Below it, a filter bar shows 'All (2) | Active (2) | Auto-updates Enabled (1) | Auto-updates Disabled (1)'. A search bar is on the right. A table lists installed plugins. The first plugin is 'Easy WP SMTP', which is active and has its automatic updates enabled. The second plugin is 'WooCommerce', which is also active but its automatic updates are disabled. Both plugins have links for 'Settings' and 'Deactivate'. At the bottom of the table, there are bulk action controls and a count of '2 items'.

<input type="checkbox"/>	Plugin	Description	Automatic Updates
<input type="checkbox"/>	Easy WP SMTP Settings Deactivate	Send email via SMTP from your WordPress Blog Version 1.5.3 By Easy WP SMTP team View details Settings	Enable auto-updates
<input type="checkbox"/>	WooCommerce Settings Deactivate	An eCommerce toolkit that helps you sell anything. Beautifully. Version 7.3.0 By Automattic View details Docs API docs Community support	Disable auto-updates
<input type="checkbox"/>	Plugin	Description	Automatic Updates

- 4) Select Settings and configure the plugin as described in Configuration 6 -section in this guide.
- 5) Go to WooCommerce / Settings / Payments, and enable Svea payment methods you want

to use.

Method	Enabled	Description	Action
Direct bank transfer	<input type="checkbox"/>	Take payments in person via BACS. More commonly known as direct bank/wire transfer	Set up
Check payments	<input type="checkbox"/>	Take payments in person via checks. This offline gateway can also be useful to test purchases.	Set up
Cash on delivery	<input type="checkbox"/>	Have your customers pay with cash (or by other means) upon delivery.	Set up
PayPal Standard – PayPal	<input type="checkbox"/>	PayPal Standard redirects customers to PayPal to enter their payment information.	Set up
Svea – Svea Payments	<input checked="" type="checkbox"/>	Take payments via Svea.	Manage
Svea Credit Card and Mobile – Credit Card and Mobile	<input checked="" type="checkbox"/>	General Svea settings are managed here .	Manage
Svea Invoice and Hire Purchase – Invoice and Hire Purchase	<input checked="" type="checkbox"/>	General Svea settings are managed here .	Manage
Svea Online Bank Payments – Online Bank Payments	<input checked="" type="checkbox"/>	General Svea settings are managed here .	Manage
Svea Other Payments – Other Payments	<input checked="" type="checkbox"/>	General Svea settings are managed here .	Manage

Save changes

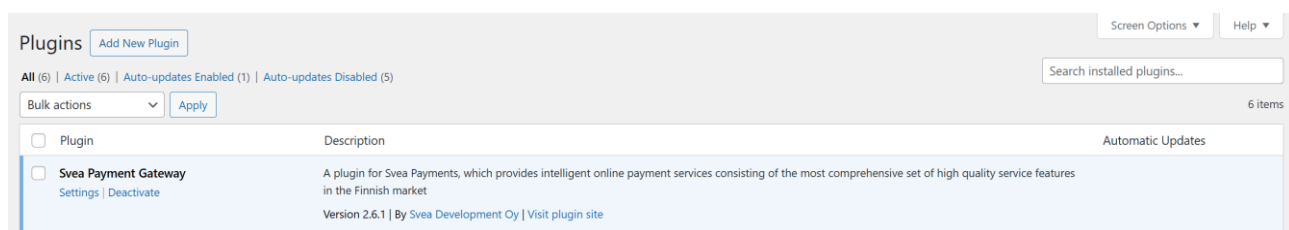

6) Continue with configuring the plugin, see chapter 6 *Installation*.

5.2 Upgrading the existing plugin

It's wise to take back up of your database and files. The configuration and payment information are saved on the webstore database.

Check the current version of the Svea Payment Gateway.

- If it's older than 2.4.0 it's recommended that you Deactivate and Delete the older module first as the package structure was different in earlier versions and straightforward upgrade is not supported.
- If the current version is 2.4.0 and above, when uploading the release package, WooCommerce will notice that you have the plugin installed already and it will upgrade the current version to a new one.

Plugin	Description	Automatic Updates
<input checked="" type="checkbox"/> Svea Payment Gateway Settings Deactivate	A plugin for Svea Payments, which provides intelligent online payment services consisting of the most comprehensive set of high quality service features in the Finnish market Version 2.6.1 By Svea Development Oy Visit plugin site	

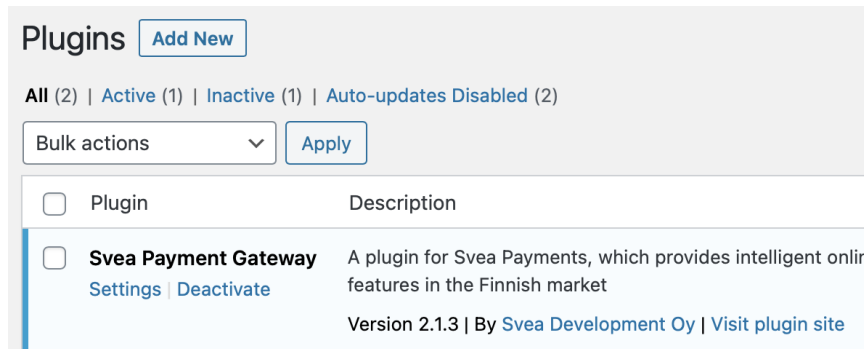

To continue the plugin upgrade, use the Installation process described in the Chapter 5.1.

The configuration will be migrated automatically in the upgrading process, so you can skip chapter 6 Configuration step after uploading a new version of the plugin module.

6 Configuration

Before you can use the Svea Payments in your WooCommerce store, you need to do some configurations on the plugin's Settings page.

You can access the settings through WordPress plugins list and Settings. Remember to *Save changes*.

The screenshot shows the WordPress 'Plugins' page. At the top, there's a header with 'Plugins' and an 'Add New' button. Below it, a filter bar shows 'All (2) | Active (1) | Inactive (1) | Auto-updates Disabled (2)'. A 'Bulk actions' dropdown menu is set to 'Bulk actions' with an 'Apply' button. The main table lists installed plugins. The first plugin is 'Svea Payment Gateway', which is active. Its description reads: 'A plugin for Svea Payments, which provides intelligent online features in the Finnish market'. Below the description, it says 'Version 2.1.3 | By Svea Development Oy | Visit plugin site'. There are links for 'Settings' and 'Deactivate' next to the plugin name.

Check your WooCommerce tax settings, for example:

- Settings / General / Enable taxes: enable tax calculation
- Settings / General / Currency options: only euro is supported
- Settings / Tax / Prices entered with tax: Yes
- Settings / Tax / Display prices in the shop: Including tax
- Settings / Tax / Display prices during cart and checkout: Including tax

6.1 Enable / Disable

Checking this checkbox activates Svea Payments as a payment option for your customers in the checkout process.

6.2 Title

Title for the payment gateway, shown on the checkout page. Defaults to Svea Payments.

6.3 Customer message

Description of the payment gateway. This message is shown below the payment gateway.

6.4 Redirect to Svea's Payment Method Selection Page

Use this option, if you want to use the payment method selection page on the Svea Payment's web pages instead of WooCommerce Checkout payment selection on the checkout page.

6.5 Payment handling fees

Optionally, you can specify extra fees per payment method or set multiple payment methods comma-separated using the same extra fee in this table.

You can remove payment fees by selecting the table row and select *Remove selected rows*.

6.6 Payment handling fee tax class

If you have specified handling extra fees, select the fee tax class here.

6.7 Seller Id

With a Svea Payments service, you'll get a unique seller id.

6.8 Secret Key and Secret key version

Svea Payments services use your seller id and a secret key combination to authenticate your webstore.

The secret key is used to sign all payments from your store to Svea Payments, so it is essential to keep the secret key secret. Never send the secret key (or a screenshot picture of it) in an unencrypted email or place it somewhere where an outsider could have access to it.

Your initial secret key's version number is *001*. If your secret key has been compromised, you can order a new secret key from Svea Payments. In that case, you need to update the version number to refer to the new secret key you have taken in to use.

Your Seller id and Secret Key are ignored when using the Sandbox mode.

6.9 Gateway URL

Svea Payments production environment (where the customers can make actual payments) uses an SSL-secured connection in a URL <https://www.maksuturva.fi>.

If you are testing the service using Svea Payments test environment (where you can walk through the whole payment process without using actual money), the connection uses URL <https://test1.maksuturva.fi>. Remember to change the URL to refer back to production mode before opening your store to real customers.

Both service environments are separate and have specific service accounts, so you must order the credentials separately.

6.10 Payment Prefix

Svea Payments service requires unique ids for each payment. Orders with payment id that has already been used are not accepted.

As the payment id is calculated from the order numbers, if you move your Svea Payments account to a new software installation and order numbering starts from the beginning, a conflict in payment id numbers can occur. Adding a unique prefix for payment ids after re-installation of the web store can prevent the collision of the payment id numbers.

By default, the prefix is empty.

6.11 Send delivery confirmation on status change to status

If you have delivery confirmation (toimitustietojen vahvistaminen) feature option enabled with Svea Payments service, use this dropdown to select status trigger when the updated order status and delivery information will be sent to the Svea Payments.

The default value is Completed. In other words, when the order is marked as delivered and WooCommerce order status is completed.

6.12 Send delivery confirmation only for specific payment methods

If a comma separated list of the payment method codes is specified, the delivery confirmation (see 6.11) is only sent for these payment methods. For example:

FI01, FI02

If this payment method code list is empty and delivery confirmation is activated, the delivery confirmation is set for the all payment methods.

6.13 Part Payment widget

Part Payment widget can be added on the WooCommerce catalog *single product page* using this setting.

Below this setting are possible customization parameters for the widget. If no value is set, the part payment widget will use default values in the script.

Part Payment widget on Product page

☒ Part Payment widget on Product page
 Enable the Part Payment widget on the product page.

6.14 Collated payment method view

There is a new WooCommerce payment method named Svea Payments Collated since version 2.4.0.

When activated, you can edit this method title and assign different subgroups with custom group names and payment methods to it. Additionally, you can use this method in conjunction with other Svea payment methods.

Configuration example:

Collated payment methods

Collated payment method title
Svea Payments

Payment group 1 title
Online bank payments

Payment group 1 methods
FI01,FI02,FI03,FI04,FI05,FI06,FI07,FI08,FI09,FI10,FI11,FI12,FI13,F

Payment group 2 title

7 Language customization

Payment Gateway Module can be translated into different languages, and individual texts can be altered by editing .po -files in the languages directory and compiling them as corresponding .mo -files.

One standard tool for this in Windows- and Mac-environments is Poedit (poedit.net). Remember to add the new and altered files to the plugin zip-archive and reinstall the Plugin to WordPress (See section 5).

8 Testing the installation

It is strongly encouraged that the Svea Payments payment gateway plugin is thoroughly tested before taking it into use in on production web store. It is essential to verify that customer, product information, prices, taxes, and discount and payment message hash calculation is transmitted correctly to Svea Payments.

8.1 Testing in Svea Payments test environment

Use Svea Payment test environment (<https://test1.maksuturva.fi>) to test webstore before production. Set this value to the configuration Gateway URL field.

The test environment uses different credentials than Svea Payments production environment, and test environment service needs to be ordered separately from the existing Svea Payments service. More information about testing is available at <http://docs.maksuturva.fi>.

After testing the functionality, delete all orders that are made using test environment credentials and set the Gateway URL to <https://www.maksuturva.fi> . Also change the credentials to match the production environment credentials.

9 Checkout and payment

At the checkout page, select Svea Payments as the payment method during the checkout. This list can vary related to enabled payment methods in section 5.1, step 5.

If needed, you can reorder the payment methods on the Payment / Payment Methods WooCommerce admin page by using up and down icons.

Also check the example picture of Collated payment methods view in section 6.15.

10 Administration

When a customer chooses to place an order and is redirected to Svea Payments service, the order's status is "pending".

After the payment is completed and the customer returns to the shop from Svea Payments, the status is changed to "processing".

If an error occurs or the customer cancels the payment, customer is returned to the store, and the order status is changed to error or canceled.

10.1 Payment verification

The Svea Payments Payment Gateway Plugin automatically verifies payments from Svea Payments and displays the status on the order page.

If the order is still pending after a certain amount of time, it's most likely because the customer has left the payment gateway or closed the browser window in the middle of the payment process. In this case, it's OK for the admin to cancel the order manually.

10.2 Refunds

The Svea Payment Gateway Plugin supports refunding the order.

After pressing the order page's refund button, there is an option for making the refund through Svea.

If the payment is not already settled to the shop, the refund is done automatically after pressing the button.

If the payment is already settled, a message will appear to the order comments with payment details so that the shop can pay the refund back to Svea. Svea can then pay it back to the customer.

If the order has been paid through online banking, the plugin will notify that the refund has to be done directly in Svea Extranet. It is possible to add additional information, such as IBAN, required for refund of online banking payments.

11 About HPOS

From Svea Payments module version 2.5.0 and above, we support WooCommerce HPOS addition to legacy mode.

HPOS is acronym for WooCommerce High-Performance Order Storage. It's enabled as default from WooCommerce 8.2 and above. If you have upgraded your webstore from an earlier version, you probably don't have HPOS enabled yet.

HPOS separates order and payment metadata from older posts-tables to new four tables named:

- `_wc_orders`
- `_wc_order_addresses`
- `_wc_order_operational_data`
- `_wc_orders_meta`

It's advised that you **use HPOS in compatibility mode**. This allows maximum compatibility with all plugins. The settings can be found at WooCommerce Settings / Advanced / Features tab. Preferred settings:

Features

Start using new features that are being progressively rolled out to improve the store management experience.

Order data storage

☐ WordPress posts storage (legacy)

☒ High-performance order storage (recommended)

☒ Enable compatibility mode (synchronizes orders to the posts table).

It is important to keep the sync in place until all plugins and custom code are compatible with the new HPOS. Any performance penalties will be temporary, resulting from additional inserts present during the sync.

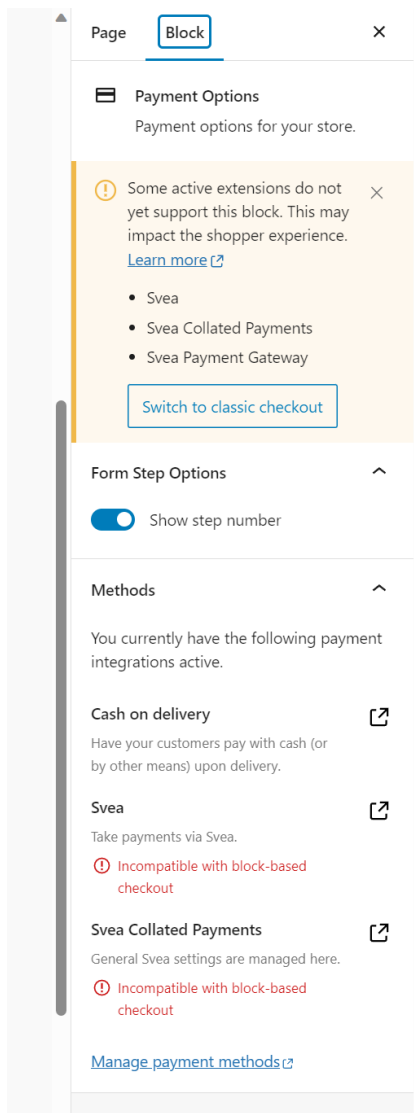

When you enable HPOS mode first time, the WooCommerce will run a migration job for database to synchronize orders from old structure to new tables.

See more: <https://woo.com/document/high-performance-order-storage/>

12 WooCommerce 8.3+ Blocks mode theme compatibility

WooCommerce 8.3+ installations have new blocks mode themes activated by default. Currently, the payment module is incompatible with this blocks mode, but you can enable the Classic mode for the checkout page as follows:

- 1) Add temporarily WooCommerce Cash On Delivery payment method in WooCommerce payments page
- 2) Edit checkout page: Appearance / Editor / Pages / Checkout
- 3) Click **Payment Options block** and on the right-side bar Blocks tab, and you get following warning about extension support as image below.
- 4) Click **Switch to classic checkout** button to transform checkout page to classic checkout page.

- 5) Click **Save Page** upper right corner. If there is a dialog middle in the screen, don't click it's Transform to blocks button as this will revert changes.
